Sync both ways and import test cases

Choose the winning value row by row before anything moves

Decide every conflict before anything syncs

Your board is in Jira. Your test cases are kept somewhere else. Keeping the two honest is manual work, and it usually happens the week you can least afford it.

This release adds a three-step wizard for the two-way sync. Step one sets the scope. You choose a board, then the items you want included, and a parent comes across with any child you select. Coming in:

projects, sprints, issues, statuses, members and story points, mapped to TechnoCenter work items. Going back out: the epics and test cases you approve, to the right issues and sprints. Jira stays the source of truth for your board.

Step two handles the disagreements. You see the TechnoCenter value and the Jira value side by side, and you pick the winner for status, priority and due date before anything syncs. Data that exists only in TechnoCenter is not overwritten.

● Step 2 of 3 — Conflict Resolution

These are the shared fields where TechnoCenter and Jira disagree. The default winner follows your connection setting — override any row before continuing.

EPIC VOLT-2 Transfers & Payments			3 conflicts
FIELD	TECHNOCENTER VALUE	JIRA VALUE	WINNER
Status	In Progress	Done	☐ TechnoCenter ☒ Jira
Severity / Priority	Medium	High	☐ TechnoCenter ☒ Jira
Due Date	2026-07-04	2026-06-30	☐ TechnoCenter ☒ Jira

FEATURE VOLT-206 Scheduled transfer			3 conflicts
FIELD	TECHNOCENTER VALUE	JIRA VALUE	WINNER
Status	In Progress	Done	☐ TechnoCenter ☒ Jira
Severity / Priority	Medium	High	☐ TechnoCenter ☒ Jira
Due Date	2026-07-04	2026-06-30	☐ TechnoCenter ☒ Jira

Step two. Both values side by side, and you choose the winner.

Test case import arrives in the same release. An export from your existing test tool goes across exactly as it is. The check step shows what was read and what was defaulted. Any hierarchy the export does not resolve is parked under an "Unassigned" placeholder. Nothing is

created until you review and import. Traceability to epic, feature, user story and test requirement is created as the cases land.
